Background

- TVET programmes equip individuals with practical and employable skills.
- Measuring programme outcomes helps determine whether training achieves its intended objectives.
- This assessment evaluates participant experiences, employment outcomes, and programme satisfaction using survey data.

Problem Statement

- Limited evidence is often available on the long-term impact of TVET programmes.
- Programme managers require reliable data to support planning and decision-making.
- This project applies data analytics to evaluate programme performance and identify areas for improvement.

Project Aim

To assess the impact of the TVET programme by collecting, analysing, and visualising participant data to generate evidence that supports programme evaluation and informed decision-making.

Project Methodology

Survey Design

Questionnaire developed with validation rules and skip logic.

Data Collection

Responses collected through KoboToolbox, CommCare, and Google Forms.

Data Cleaning

Dataset validated, cleaned, and prepared for analysis.

Excel Analysis

Descriptive statistics, Pivot Tables, Pivot Charts, and dashboard.

SQL Analysis

Queries used to retrieve, summarise, and validate analytical results.

Power BI Dashboard

Interactive dashboard developed using DAX measures and visualisations.

Reporting

Findings documented with recommendations and presentation.

Data Collection & Management

KoboToolbox

CommCare

Google Form

Exported Data

Microsoft Excel

Cleaned Dataset

Final Dataset Used for Analysis: 54 Valid Responses

Data Analysis Workflow

- 54 validated responses
- Duplicate-free
- Ready for analysis

 **Cleaned Dataset**

- Data validation
- Frequency analysis
- Pivot Tables
- Pivot Charts

 **Microsoft Excel**

- Data querying
- Aggregation
- Trend analysis
- Query validation

 **SQL Server**

- Data modelling
- DAX measures
- Interactive dashboard
- KPI visualization

 **Power BI**

- Key findings
- Recommendations
- Decision support

 **Insights**

The cleaned dataset was analysed using Microsoft Excel, SQL Server, and Power BI to generate reliable insights for programme evaluation.

Key Findings

- ✓ A total of 54 valid responses were analysed.
- ✓ Male respondents accounted for 55.6%, while females represented 44.4%.
- ✓ Self-employment was the most common employment outcome (70.4%).
- ✓ Participants reported high overall satisfaction with the TVET programme.
- ✓ Most respondents indicated they would recommend the programme to others.

 54
Respondents

 70.4%
Self-employed

 High
Satisfaction

Key Insight

The findings suggest that the TVET programme has contributed positively to participants' employment outcomes and overall satisfaction, with self-employment emerging as the dominant outcome among respondents.

Interactive Dashboard Highlights

 54
Respondents

 70.4%
Self-employed

 High
Satisfaction

 Strong
Recommendation
Rate

The Power BI dashboard provides an interactive view of the survey results, enabling users to monitor:

- Gender Distribution
- Employment Status
- Training Outcomes
- Income Improvement
- Participant Satisfaction
- Programme Recommendations

Interactive dashboards transform survey data into clear, actionable insights that support evidence-based programme monitoring and decision-making.

Recommendations

CORPORATE PLANNING

These recommendations are based on the survey findings and are intended to support continuous improvement of future TVET programmes.

Expand access to vocational training so that more individuals can benefit from practical skills development.

Strengthen entrepreneurship support programmes to help graduates grow and sustain self-employment opportunities.

Maintain the current quality of training while continuously improving learning facilities and practical resources.

Conduct regular monitoring and evaluation to measure long-term employment and income outcomes.

Use participant feedback to guide future programme planning and continuous improvement.

Conclusion

This assessment demonstrates how digital data collection and data analytics can be used to evaluate the impact of TVET programmes.

The analysis indicates positive participant outcomes, particularly in employment and programme satisfaction. By integrating KoboToolbox, CommCare, Google Forms, Microsoft Excel, SQL Server, and Power BI, the project produced reliable insights that can support evidence-based planning, monitoring, and decision-making.

Overall, the project achieved its objectives and provides a practical framework for evaluating similar development programmes.

✓ Complete End-to-End Workflow

✓ Data-Driven Insights

✓ Evidence-Based Recommendations

"Reliable data becomes valuable only when it is transformed into meaningful insights that support better decisions."

Thank You & Questions

THANK YOU

Questions & Discussion

Thank you for your time and attention.
I welcome your questions, comments, and feedback.
